

NEW

RMO's Automatic Universal Tweezer Gauge

The first Automatic Tweezer Gauge efficient with all types of self-ligating and conventional brackets in .018 or .022.

Superior Quality maximizes satisfaction. A top quality instrument offers two unbeatable advantages for its user.

• *Top quality instruments make the daily work more satisfying. They allow more precision and a ergonomic work process which leads to better work results day to day over years and years.*

• *Top quality instruments are the best economic choice. The top quality instruments enable their users to achieve the same work result in less time or better work result in the same time.*

Conventional Tweezer Gauge placed into a Roth bracket slot (Torque +12°). The height of the gauge is not constant

With the new Automatic universal tweezing gauge all type of brackets (self-ligating or not) are positioned precisely without surplus bonding paste, thanks to the two round tips inserted in the bracket slot. The bonding phase is more efficient.

The same conventional Tweezer Gauge placed into the same bracket in a horizontal position. In this case the height is respected however the occlusal surplus bonding paste will make the placement of the bracket uncertain and imprecise.

The opposite side of the Automatic universal Tweezer is equipped with a straight notched tip, to help place the wire

UNIVERSAL AUTOMATIC TWEEZER GAUGE

Automatic Tweezer Gauge	3.5 mm	ECIO412	3.5
Automatic Tweezer Gauge	4.0 mm	ECIO412	4.0
Automatic Tweezer Gauge	4.5 mm	ECIO412	4.5
Automatic Tweezer Gauge	5.0 mm	ECIO412	5.0
